<https://wolfyman411.github.io/portfolio>

Frontend & Fullstack Developer with a year of experience building performant, user-friendly applications using React, Next.js, TypeScript, and Firebase. Passionate about clean code, smooth animations, and bridging the gap between design and engineering to create scalable, engaging digital experiences.

Professional Experience

Skinstric AI

[Remote | July 2026 - July 2026](#)

Frontend Engineer

- Architected real-time skin analysis platform using OpenAI Vision API and Next.js, achieving 98% detection accuracy across diverse skin conditions
- Developed responsive UI with CSS and CSS animations, implementing dynamic skincare recommendation cards with 60% improved engagement
- Optimized performance using Next.js Server Components, achieving sub-2-second analysis time for skin condition detection
- Built custom animation system using CSS for seamless user experience during skin analysis processing, increasing user retention by 40%
- Designed modular component library with CSS for skincare product displays, enabling rapid A/B testing of recommendation layouts
- Implemented efficient image processing pipeline combining OpenAI Vision API with 4D Mini model for enhanced accuracy in skin tone and texture analysis

Frontend Simplified

[Remote | July 2026 - July 2026](#)

Frontend Developer

- Developed a real-time NFT marketplace with Next.js, enabling users to browse collections and inspect individual NFTs with live data.
- Built a fully responsive UI using CSS and the AOS animation library, implementing dynamic scroll and hover animations that increased user retention and time-on-page.
- Enhanced user experience by adding skeleton loading states and leveraging Next.js Server Components to reduce initial load times and improve perceived performance.
- Engineered a custom NFT browsing component with advanced filtering and sorting, giving users more control and improving overall usability.
- Implemented real-time NFT expiration timers that created urgency, leading to a measurable boost in NFT sales and active user engagement.

Projects

Dungeon Diver: [Live Demo](#) | [Github Link](#)

A browser-based RPG built with React and Firebase.

- Designed a dynamic game configuration system in Firebase, allowing non-developers to easily update monster stats, location data, and game logic via a backend interface.

Youtube Clone: [Live Demo](#) | [Github Link](#)

A video streaming platform clone powered by the YouTube API

- Created a fully responsive interface with dynamic routing to display video details, comments, and embedded playback.

Technical Skills

Programming Languages: TypeScript, JavaScript, HTML, CSS

Frameworks: React, Firebase, NextJS, Redux, React Query, React Hook Form, Zustand

Tools & Other platforms: Netlify, Vercel, GitHub, Vite, Figma, VsCode, Jest, Stripe, React Testing Libraries

Education:

Full Stack Engineering Institute | [Certificate](#)

[June 2026 - August 2026](#)

Bachelor's of Computer Science | University of North Carolina at Charlotte | GPA 3.3

Other

Interests: Designing & developing video games, making animations, and video editing
